Immunizing an animal and eliciting an immune response against heterologous HIV-1 in an animal, involves administering an immunogen comprising modified HIV-1 envelope protein, or DNA or virus encoding the The present invention relates to methods for immunising an animal, preferably human, against heterologous human immunodeficitency virus type 1 (HIV-1), and eliciting a heterologous immune response to HIV-1 in that animal. The method comprises administering an immunogen having at least Human immunodeficiency virus type 1; HIV-1; gp140 envelope protein; second hypervariable region; V2; SF162deltaV2; SF162DV2; AIDS; acquired immunodeficiency syndrome; anti-HIV; mutant; mutein; immunogen. N-terminal mutant of modified HIV-1 SF162DV2 gp140 envelope protein. Human immunodeficiency virus 1; strain SF162 (clade B) /note= "Encoded by CAGCTC" Shrivastava I; (AARO-) AARON DIAMOND AIDS RES CENT Location/Qualifiers Ā AAU75156 standard; protein; 619 Claim 5; Fig 17; 62pp; English. 27-JUN-2001; 2001WO-US020483. 27-JUN-2000; 2000US-0214608P. 26-JUN-2001; 2001US-00891609. one modified HIV-1 envelope protein with a deletion in the second hypervariable (V2) region or its fragment, or DNA or virus encoding the modified HIV-1 envelope protein. The invention discloses the polymucleotide and amino acid sequences for the full-length HIV-1 entent of SF162DV2) The immunogene protein, and, for an N-terminal mutant of SF162DV2. The immunogene of the invention are useful for immunialing an animal against heterologous HIV-1 strains by eliciting neutralising antibodies or protective antibodies in the animal. The method can be used to treat acquired immunodeficiency syndrome (AIDS). The present sequence represents the N-terminal mutant (deletion of amino acids 1-27) of modified HIV-1 SF162DV2 gp140 envelope protein
                                                                                                                                                                                                                                                                                                                                                                                             120

```
The present invention relates to methods for immunising an animal, preferably human, against heterologous human immunodeficiency virus type 1 (HIV-1), and eliciting a heterologous immuno esponse to HIV-1 in that animal. The method comprises administering an immunogen having at least one modified HIV-1 envelope protein with a deletion in the second hyperoxariable (V2) region or its fragment, or DNA or virus encoding the modified HIV-1 envelope protein. The invention discloses the polymucleotide and amino acid sequences for the full-length HIV-1 expended and manion acid sequences for the full-length HIV-1 mutant of SPIG2DV2. The immunogens of the invention are useful for immunising an animal against heterologous HIV-1 strains by eliciting neutral ising antibodies or protective antibodies in the animal. The method can be used to treat acquired immunodeficiency syndrome (AIDS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   147
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

The expression cassettes, HIV polypeptides and polynucleotides encoding the HIV polypeptides are useful for DNA immunization or generating an immune response against HIV in a subject. The polynucleotides are also useful for generating packaging cell lines or producing the HIV polypeptides. Sequences ABR55684-688 represent env polypeptides from various HIV

Worst immunostice mount amino acid deleted or replaced in the region corresponding to residues 420-436 or 119-123 and 199-210 relative to isolate HXB-2 are disclosed. The modified Env polypeptide is based on HIV strain SP162, with numbering relative to isolate HXB-2. The Env polypeptides are modified so as to expose at least part of the CD4 polypeptides are modified HIV Env polypeptides, coding polymucleotides and constructs, further comprising an adjuvant, are used for inducing an immune response in an individual. The method involves administering a first composition comprising a polymucleotide encoding the Env polypeptide in a priming step and administering a second composition comprising a modified Env polypeptide as a booster in an amount conficient to induce an immune response in the individual. The first and/or second composition further comprises an adjuvant (claimed). The intracellularly produced Env polypeptides can be used for a number of diagnostic and therapeutic purposes to determine the presence of reactive antibodies/and or Env proteins in a biological sample to aid in the diagnosts of HIV infection or disease status or as measure of response to immunization. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel modified HIV Env polypeptides useful as immunizing agents and for preparing a vaccine to elicit an immune response against a broad range of HIV subtypes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       immunogenic modified human immunodeficiency virus (HIV) envelope

                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel expression cassette comprising a polymucleotide sequence encoding a polypeptide including an HIV Gag, Enr. Nef, piSRnaseH, Pol, Tat, Prot, or Rev polypeptide. The novel expression cassette can be used to treat HIV type C by gene therapy or used in the development of a vaccine. The gene delivery vector is administered intramuscularly, intramuscosally, intranasally, subcutaneously, intradermally, intravaginally, intrarectally, orally or intravenously. The expression cassette is useful for immuniaation, generating packaging cell lines and producing HIV polypeptides. This sequence represents an HIV Type C related protein of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       273

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             453
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               502
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      562
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          572
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              622
                                                                                                                                                                                                                         The invention describes a synthetic polynucleotide encoding 2 or more immunogenic HIV polypeptides, where at least 2 of the polypeptides are derived from different HIV subtypes. The polynucleotide is useful for immunisation, generation of packaging cell lines, or production of HIV polypeptides. The polynucleotide and its encoded proteins are useful as immunogenic compositions or vaccines for generating humoral or cellular immunocenses against HIV in a subject, or for inducing neutralising antibodies against HIV. The gene delivery vector comprising the polynucleotide is also useful for DNA immunisation of, or for generating an immune response (e.g. a humoral or cellular immune response) in, a subject such as a mammal, particularly a human. This is the amino acid sequence of a human immunodeficiency virus (HIV) envelope (env) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polynucleotides encoding antigenic HIV Type C polypeptides, useful in applications including DNA immunization or generation of packaging cell lines, particularly in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes expression cassettes comprising a polynucleotide sequence encoding a polypeptide comprising immunogenic HIV type C polypeptides. The expression cassettes comprise any of the HIV type C sequences encoding Gag, Pol, Vif, Vpr, Tat, Rev, Vpu, Env or Nef (I). (I) have immunostimulant activity and can be used in gene therapy. The HIV type C polynucleotides are useful in applications including DNA immunisation of packaging cell lines, and production of HIV Type C proteins. The polynucleotides are particularly useful in gene therapy and DNA immunisation applications. ABL33942 to ABL40054 and ABB062015 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   VIENFINWKNINWVEQMHEDIISLWDQSLKPCVKLTPLCVTLHCTNLKNATNTKSSNWKEM 142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          153

Human immunodeficiency virus 1.

WO200160838-A2

23-AUG-2001

16-FEB-2001; 2001WO-US005288 18-FEB-2000; 2000US-0183659P

```
of the neutralising epitopes in the V2, V4 and C4 domains are variable, the amount of variation is highly constrained. This facilitates the design of HIV subunit vaccines that can induce antibodies that neutralise the most common HIV strains for a given geographic region. This invention provides a multivalent gpl20 subunit vaccine where the gpl20 present in the vaccine is from at least two HIV isolates which have different amino acid sequences for a neutralising epitope in these regions. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 16-OCT-2003 to standardise
                                                                                                                                                                                                                                                                                                                    120

Preparing an ancestral viral amino acid sequence useful as a vaccine comprises determining a recent ancestor of a circulating virus by maximum

Claim 8; Page 54; 89pp; English

comprises determining a recentlikelihood phylogeny analysis.

UNIW ) UNIV WASHINGTON

The present sequence is that of an ancestral HIV-1 group M, subtype B and ancestral viral gene sequences and ancestral viral protein sequence for highly diverse viruses, such as HIV-1. The cuthods use samples of circulating viruses to determine an ancestral coviral sequence by maximum likelihood phylogeny analysis. In the present case, the ancestral HIV-1 subtype B env sequence (see AAH56468) was determined using 38 subtype B sequences (obtained from 9 different countries) and 3 subtype D (outgroup) sequences. The distances between this ancestral viral sequence and circulating strains used to determine to average 12.3% (range: 8.0-21.0%) while the available specimens were 17.3% different from each other (range: 13.3-23.2%). Thus, the consensus sequence was, on average, more closely related to any given circulating virus than to any other variant. The ancestral gpi60 sequence circulating virus than to any other variant. The ancestral gpi60 sequence consensus amino acids were represented. Thus, an immunogenic composition conto this subtype B ancestor protein will elicit broad neutralising antibody against HIV-1 isolates of the same subtype, and will also elicit consensus amino confines mediated by antigen sepecific T-cells. A claimed vaccine composition comprises a viral ancestor protein or its immunogenic fragment, especially one derived from the HIV-1 group M subtype B gp160 concentral protein. The method comprises typing all individuals of a population of patients infected with a microorganism for at least one selected intrinsic polymorphic marker involved in the host response to the presence of the microorganism. The method is useful for examining selective pressures confronting a wide range of organisms that exhibit

pathogenic traits in a host, such as bacteria, fungi, mycobacterium, viruses and virus-like particles; for examining microorganisms that have adapted to evolve rapidly, including HIV and AIDS related viruses and the hepatitis related viruses such as HCV and HBV. The method is useful for designing a vaccine to prevent or delay the emergence of drug resistance in patients treated with a particular drug specific for a microorganism where the drug affects the replication of the microorganism at the nucleotide or amino acid level. The present sequence represents a HIV envelope protein, which is expected to provide optimal cytotoxic T lymphocyte (CTL) induced therapeutic protection to the cohort examined in

                                                                                                   qq
                                                                                                                                                           The sequence is the result of cloning a hybrid envelope gene from HIV variants BH10 and RF. A central portion of the RF gene was used, the rest being from te distantly related variant BH10. The resulting clone, pAcHT6 produces a hybrid gp 160 envelope protein with novel immunological and antigenic characteristics. It may be used to as a vaccine and for diagnosis and therapy of AIDS. A positive clone was selected by hybridisation using a HIV-1 env probe. This clone, designated BA-LI, was found to contain the entire gene for the envelope protein on a 2.8 kb HindIII.Xbal fragment and a 0.4 kb EcoRI-HindIII fragment. When cloned together these fragments comprise the env gene, as well as the coding regions for rev and the rev-responsive element of env, both necessary for efficient expression in eukaryotic cells. The claimed recombinantly produced envelope protein can be used as an immunogen for raising antibodies against HIV. (Updated on 25-MAR-2003 to correct PF field.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BA-
                                                                                                                                                                                                                                                                       The present sequence represents the envelope protein of the BA-L (ATCC 40890) strain of Human immunodeficiency virus type 1 (HIV-1) strain MN-STI. BA-L is more typical of United States isolates of HIV-1 than previously known strains. Recombinant, complete env protein of the BA-L strain is used as a vaccine component and for immunotherapy of existing HIV infections, to detect HIV-specific antibodies, e.g. in donated blood, and as an immunogen to raise specific antibodies, for HIV-1 diagnosis. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     87
                                                                                                                                                   DNA encoding env protein of the human immune deficiency virus isolate I
L - useful for producing protein for use in vaccines, as assay reagent
and to generate antibodies.

                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                        ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a viral envelope protein. The viral envelope protein comprises a viral surface protein (e.g. glycoprotein gpl20) and a corresponding viral transmembrane protein (e.g. gpl1), in which the viral envelope protein contains one or more amino acid sequence mutations that enhance the stability of the complex formed between the viral surface and transmembrane proteins. The viral envelope protein enbe used in the treatment of viral infection e.g. HIV-1 infection. The present sequence is HIV-1 SOS gpl40, which was used in the present invention. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 103,
